Please amend the present application as follows:

Claims

The following is a copy of Applicant's claims that identifies language being added with underlining ("___") and language being deleted with strikethrough ("—_"), as is applicable:

1. (Currently amended) An imaging device, comprising: a main unit that includes a print mechanism; and

an a physically separate auxiliary unit that is positioned below, and couples with, and physically supports the main unit, the auxiliary unit including an integral document finishing mechanism.

- 2. (Original) The device of claim 1, wherein the print mechanism comprises a laser print mechanism.
- 3. (Original) The device of claim 1, wherein the print mechanism comprises an ink print mechanism.
- 4. (Original) The device of claim 1, wherein the main unit further includes a scanning unit.
- 5. (Original) The device of claim 1, wherein the main unit further includes a media input tray.

- 6. (Original) The device of claim 1, wherein the auxiliary unit is configured to receive and support the main unit in a stacked configuration.
- 7. (Original) The device of claim 1, wherein the auxiliary unit has a footprint that is substantially the same as a footprint of the main unit.
- 8. (Original) The device of claim 1, wherein the auxiliary unit includes a media input tray.
- 9. (Original) The device of claim 8, wherein the document finishing mechanism is integrated with the media input tray.
- 10. (Original) The device of claim 8, wherein the document finishing mechanism is located to a side of the media input tray.
- 11. (Currently amended) The device of claim 1, wherein the auxiliary unit further includes a slot that provides access to the document finishing mechanism from an exterior of the device to enable operation of the mechanism by a user.
- 12. (Original) The device of claim 1, wherein the document finishing mechanism comprises a stapling mechanism.
- 13. (Currently amended) The device of claim 1, wherein the document finishing mechanism comprises a <u>spiral</u> binding mechanism.

- 14. (Original) The device of claim 1, wherein the document finishing mechanism comprises a hole punching mechanism.
- 15. (Original) The device of claim 1, wherein the document finishing mechanism comprises a folding mechanism.
- 16. (Original) The device of claim 1, wherein the document finishing mechanism comprises a trimming mechanism.
 - 17. (Currently amended) An imaging device, comprising: a main unit that includes a printing unit and a media input tray; and

an a physically separate auxiliary unit that couples with and physically supports the main unit by supporting the main unit in a stacked configuration, the auxiliary unit including a further media input tray and a document finishing mechanism, the document finishing mechanism being accessible from an exterior of the device through a slot provided in the auxiliary unit, wherein the auxiliary unit has a footprint that is substantially the same as the footprint of the main unit.

- 18. (Original) The device of claim 17, wherein the document finishing mechanism is integrated with the media input tray of the auxiliary unit.
- 19. (Original) The device of claim 17, wherein the document finishing mechanism is located to a side of the media input tray of the auxiliary unit.

- 20. (Original) The device of claim 17, wherein the document finishing mechanism comprises at least one of a stapling mechanism, a binding mechanism, a hole punching mechanism, a folding mechanism, and a trimming mechanism.
 - 21. (Currently amended) An imaging device, comprising:

a print mechanism;

a media input tray; and

an integral document finishing mechanism located in an a physically separate auxiliary unit that is positioned below and physically supports the media input tray, the finishing mechanism including at least one of a stapling mechanism, a binding mechanism, a hole punching mechanism, a folding mechanism, and a trimming mechanism.

- 22. (Original) The device of claim 21, wherein the print mechanism is contained within a main unit of the imaging device.
- 23. (Original) The device of claim 21, wherein the print mechanism comprises a laser print mechanism.
- 24. (Original) The device of claim 21, wherein the print mechanism comprises an ink print mechanism.
- 25. (Original) The device of claim 21, wherein the document finishing mechanism is integrated with the auxiliary unit of the imaging device that couples to the remainder of the imaging device.

- 26. (Original) The device of claim 25, wherein the auxiliary unit is configured to receive and support the main unit in a stacked configuration and includes a further media input tray.
- 27. (Original) The device of claim 26, wherein the document finishing mechanism is integrated with the further media input tray.
- 28. (Original) The device of claim 26, wherein the document finishing mechanism is located to a side of the further media input tray.
